

GUARDIAN
A VOICE AGENT

Guardian Introduction

Your Application Support Ally

September 2025

*A KaarTech
Product*

The Friction in Current Support Models

- The gap between user intent and system resolution creates operational drag ●

The Frustrated User

Users are stuck asking "Where is my ticket?" or repeating details to multiple agents. Context is lost between calls, leading to low satisfaction.

The Burdened Agent

L1/L2 agents waste valuable time on rote tasks like password resets and status checks. Human capital is drained on data entry, not problem-solving.

The Data Silo

Knowledge Base articles exist but are passive. Troubleshooting data is rarely captured structurally before a ticket is logged, resulting in poor audit trails.

Guardian Product Story

GUARDIAN
A VOICE AGENT

What is a Guardian?

Think of a Guardian Angel, they are there to support you and ensure your success.

Guardian in Business?

Our Guardian is a virtual support guide that provides thought, insight, and dependable support for your team and your corporate goals.

How Guardian Helps?

Guardian gives your team around the world access to raise tickets and handle time-consuming tasks with AI analyses.

Breaking down barriers

The User Experience Teams Companion App

Guardian Voice Agent – SAP Support Flow

PGI Issue: "Batch cannot be determined" | VL02N | SD Module

Guardian Voice Agent – SAP Support Flow

PO Approval Issue: "Cannot Determine Approver" | ME21N | MM Module

Traditional AMS Flows

- ✓ Many issues are never recorded, and users are just frustrated
- ✓ Significant internal time lost in triage & approvals
- ✓ Days spent explaining and in investigation
- ✓ Language gap from Business to IT and IT to KaarTech

~**50%** are
unreported

~**30%** are
responded internally

~**20%** are
considered AMS

Initial diagnosis can
take from
2-10 hours

Guardian Flows

Buy outcomes, not hours

Traditional AMS

"You have 500 hours/month" | Constant hour tracking
disputes Opaque margin stacking | No incentive to improve

Guardian Credits

"You have 300 issues resolved/month" | Zero time tracking
Transparent resolution path | AI improves your service
automatically

Customer Transparency

Credits purchased vs. consumed | Resolution mix (L0/L1/L2
breakdown) | MTTR by category | Top recurring issues
AI deflection trends | Prevented tickets (proactive)

Convert your current AMS contracts to a fixed cost per ticket.

What is in it for our customers?

Less interaction, less lost time, more responsive, more interactive,
less cost per ticket.

What is in it for Kaartech?

Cheaper, faster, better quality, easier to resource and report on.

“

**Free up your COE, stop wasting time
analysing and fixing L1 tickets.**

**Let your team be curious, let them go
crazy. See improvements and adoption
climb while costs stay manageable**

”
